The bag and warmer bottles gently heat the pronounced breast milk inside the bag by helping to preserve nutrients and vitamins for perfect food every time. Features and benefits Part of the Tommee Tippee Express and Go range With three simple settings for activating the automatic timer Heat milk from the freezer, refrigerator or room temperature Choose a warming bowl, glass bottle, plastic bottle or just bag Choose a milk volume of less than 100ml, Less than 200ml, more than 200ml Can be used with most branded bottles and bags too Basket helps water circulate to keep milk evenly heated Don't forget Learn more Tommee Tippee Express and Go collection while further browsing What's in the box x1 product units Want to know more: Warm up your pronounced mother mile in Tommee Tippee Express and Go warmer. Designed as part of the Express and Go range, it will gently heat breast milk in express and go bags, and is compatible with most other brands of bottles and bags. Warmer milk can be fed directly from the bag so you will not lose a precious droplet. Warmer allows you to set the starting temperature of milk from frozen to room temperature. Then you can set the volume of milk to warming and the type of container in which it is stored, and the automatic timer will then be set. The milk bowl is inside the basket and the hot water circulates to heat the milk evenly so it's at the right temperature for your baby. Get started With some answers to frequently asked questions about express and go™ Line. The answer to this varies from 2 minutes to half an hour, depending on the starting temperature of your milk, the amount and whether it is in the bag or bottle. Here's a quick guide: Absolutely. All parts of the express and go systems, except storage bags, can be sterilized either in a microwave/electric steam steriliser and can be placed in a dishwasher! I do! All our Closer to Nature (except Advanced Comfort and Ultra) can be used with your bag. We wouldn't recommend it to be honest - but there's a specially designed Express and Go handbag and bottle warmer that will do the job far better! Absolutely! However, we recommend that you check your local recycling guidelines first as they may vary across the country. No more than 6oz please! Make sure you squeeze excess air out of the bag before refrigerating or freezer. Rule 6 is a handy guide to get through: 6 hours at room temperature, 6 days refrigerated (0-4C) and 6 months in the freezer (-18C or lower). If you are saving in the fridge or freezer, make sure you have a pop date on the bag or bottle or if it is likely to get a little lost! Just once. That's because they were pre-sterilized to protect your little ones. That's a great question. The bag should remain sterile for up to 3 years as long as it is sealed and in good condition – that is, the lid is not removed and there is no damage to the bag. The key thing here is to align the bottom of the bag, so that the whole bag is filled. If you don't, it may look like there's actually more milk. Extending the bag also helps to stand upright on a flat surface, which is also quite important - the last thing you want is for it to collapse and spill its precious breast milk! Express and Go make everything simpler! Easier!
